

Walferdange, 13 November 2012

To whom it may concern

This is to certify that the team *Wings for Science*, i.e. Clémentine Bacri and Adrien Normier have participated in a research project with the Geography and Spatial Planning Research Centre of the University of Luxembourg in June and July 2012.

As part of the project *3D Luxembourg City*, *Wings for Science* successfully acquired a large series (over thousands) of airborne photographs of the city of Luxembourg. The pictures taken are currently processed using computer tools within our Geographic Information System Laboratory in order to generate a 3D geolocated model of the city.

The collaboration with Wings for Science has been highly appreciated and scientifically fruitful.

Yours sincerely,

Ass. Prof. Dr. Geoffrey Caruso

GIS and Spatial Analysis
Study Director of the Master in Geography and Spatial Planning
